

Maps for Globe at Night at latitude  $60^\circ \text{ N}$ , March 10, 20:30 local time (after astronomic twilight), assuming rather transparent air. Orion's belt is  $35^\circ$  to the right from the south,  $24^\circ$  high. The brightest fixed star, Sirius, is at left. *J.H., N. Copernicus Observatory and Planetarium in Brno and <http://www.astro.cz/darksky>*

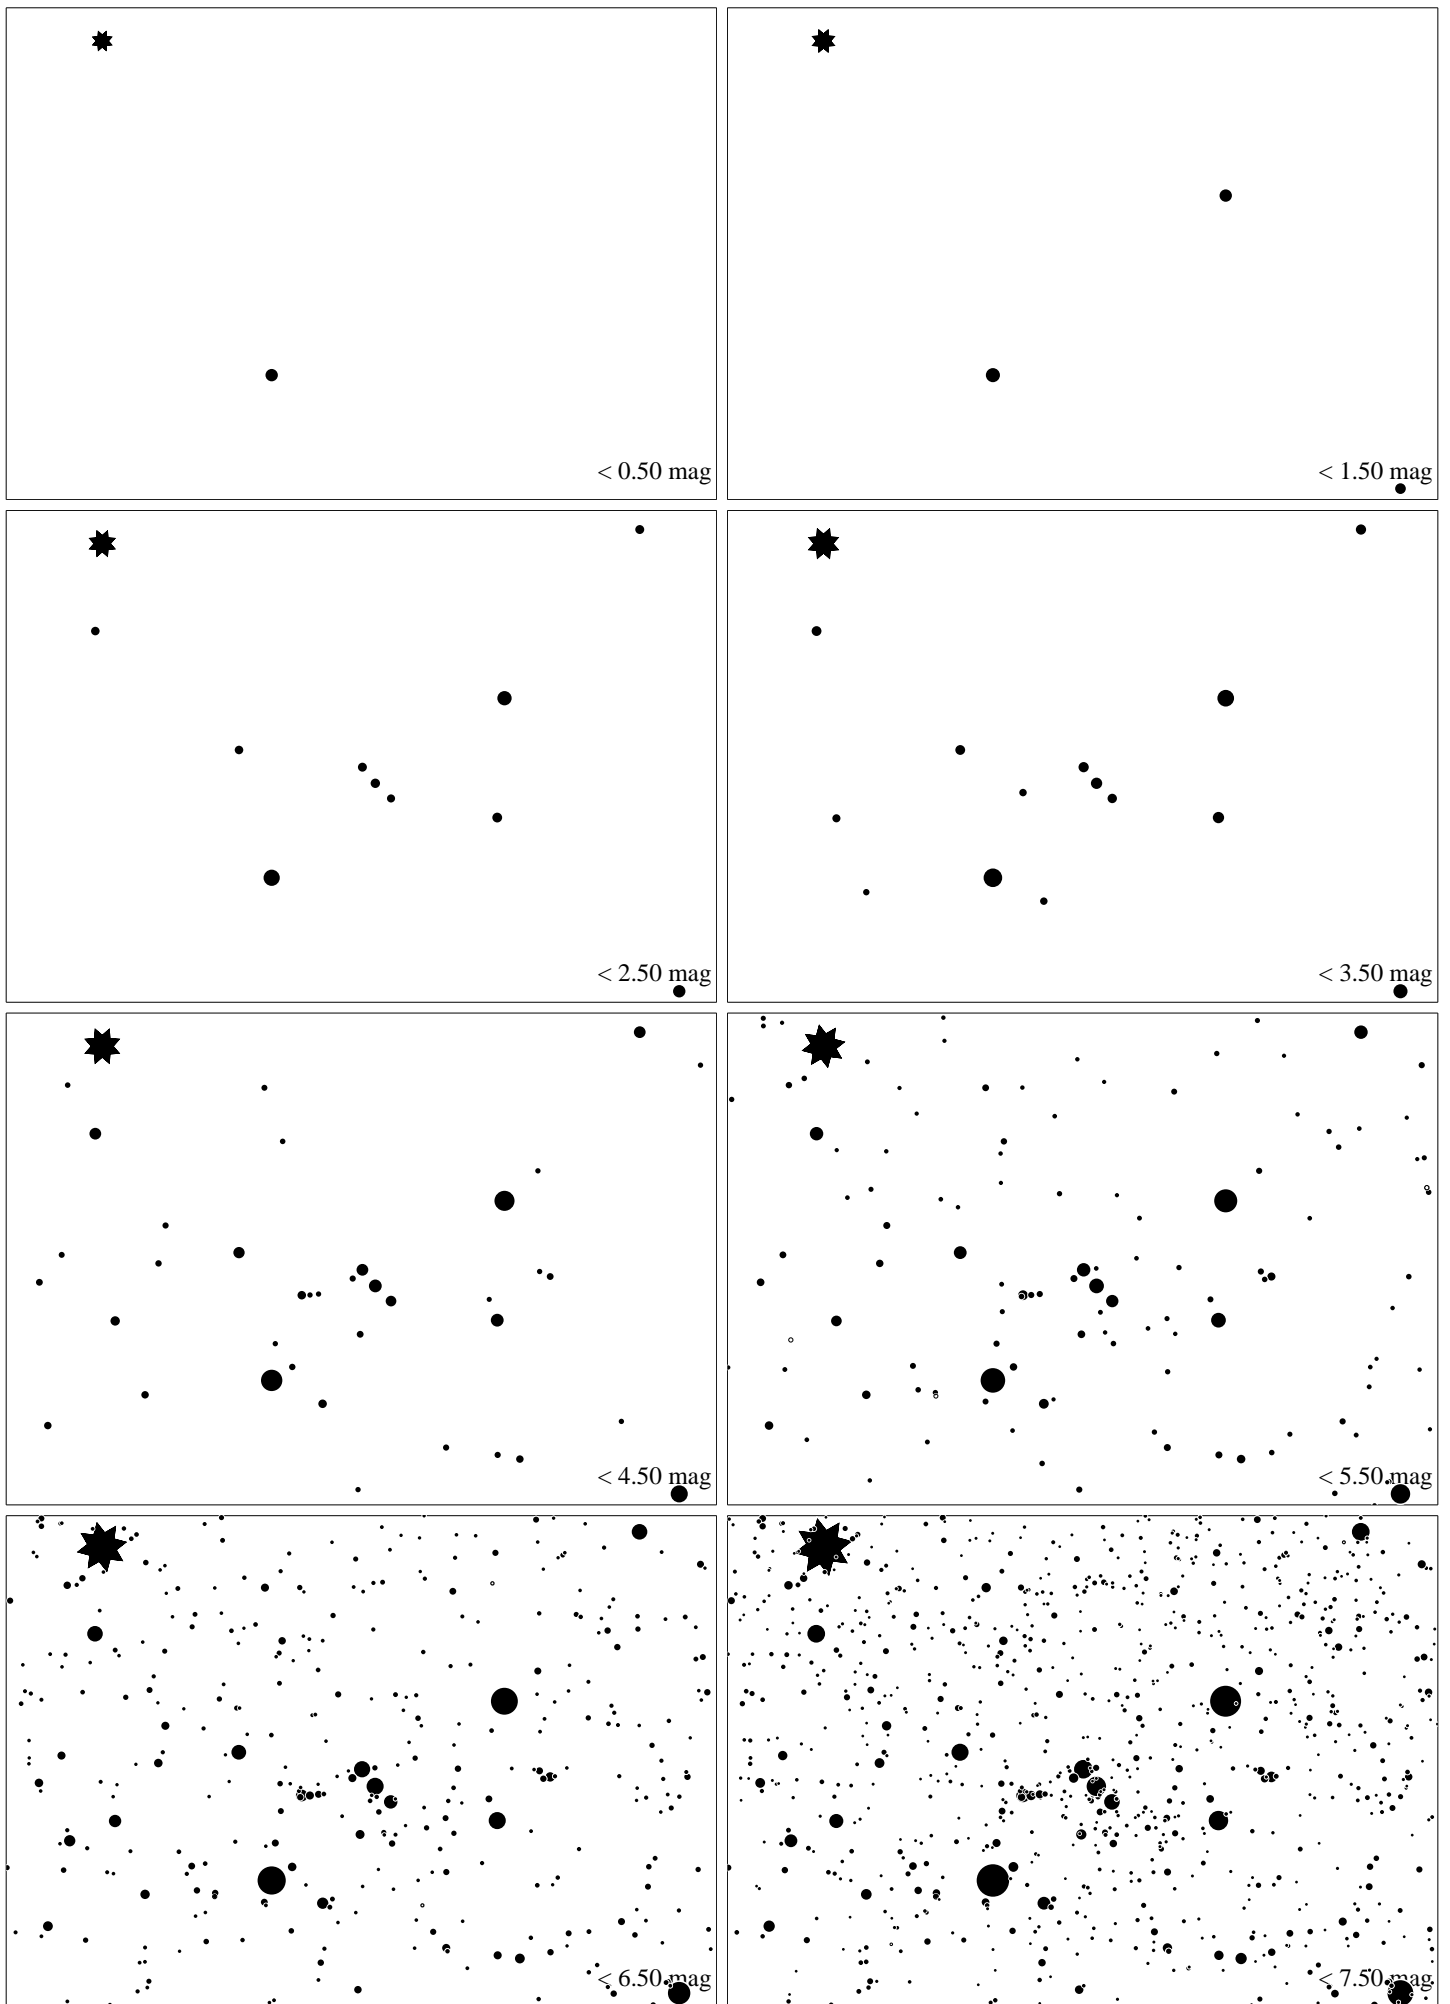

Maps for Globe at Night at latitude  $50^\circ$  N, March 10, 20 h local time (after astronomic twilight), assuming rather transparent air. Orion's belt is  $30^\circ$  to the right from the south,  $35^\circ$  high. The brightest fixed star, Sirius, is at left. *J.H., N. Copernicus Observatory and Planetarium in Brno and <http://www.astro.cz/darksky>*

Maps for Globe at Night at latitude  $40^\circ \text{ N}$ , March 10, 20 h local time (after astronomic twilight), assuming rather transparent air. Orion's belt is  $34^\circ$  to the right from the south, at  $43^\circ$  height. The brightest fixed star, Sirius, is at left. *J.H., N. Copernicus Observatory and Planetarium in Brno and <http://www.astro.cz/darksky>*

Maps for Globe at Night at latitude  $20^\circ$  N, March 10, 20 h local time (after astronomic twilight), assuming rather transparent air. Orion's belt is  $58^\circ$  over SW The brightest fixed star, Sirius, is at left.  
*J.H., N. Copernicus Observatory and Planetarium in Brno and <http://www.astro.cz/darksky>*

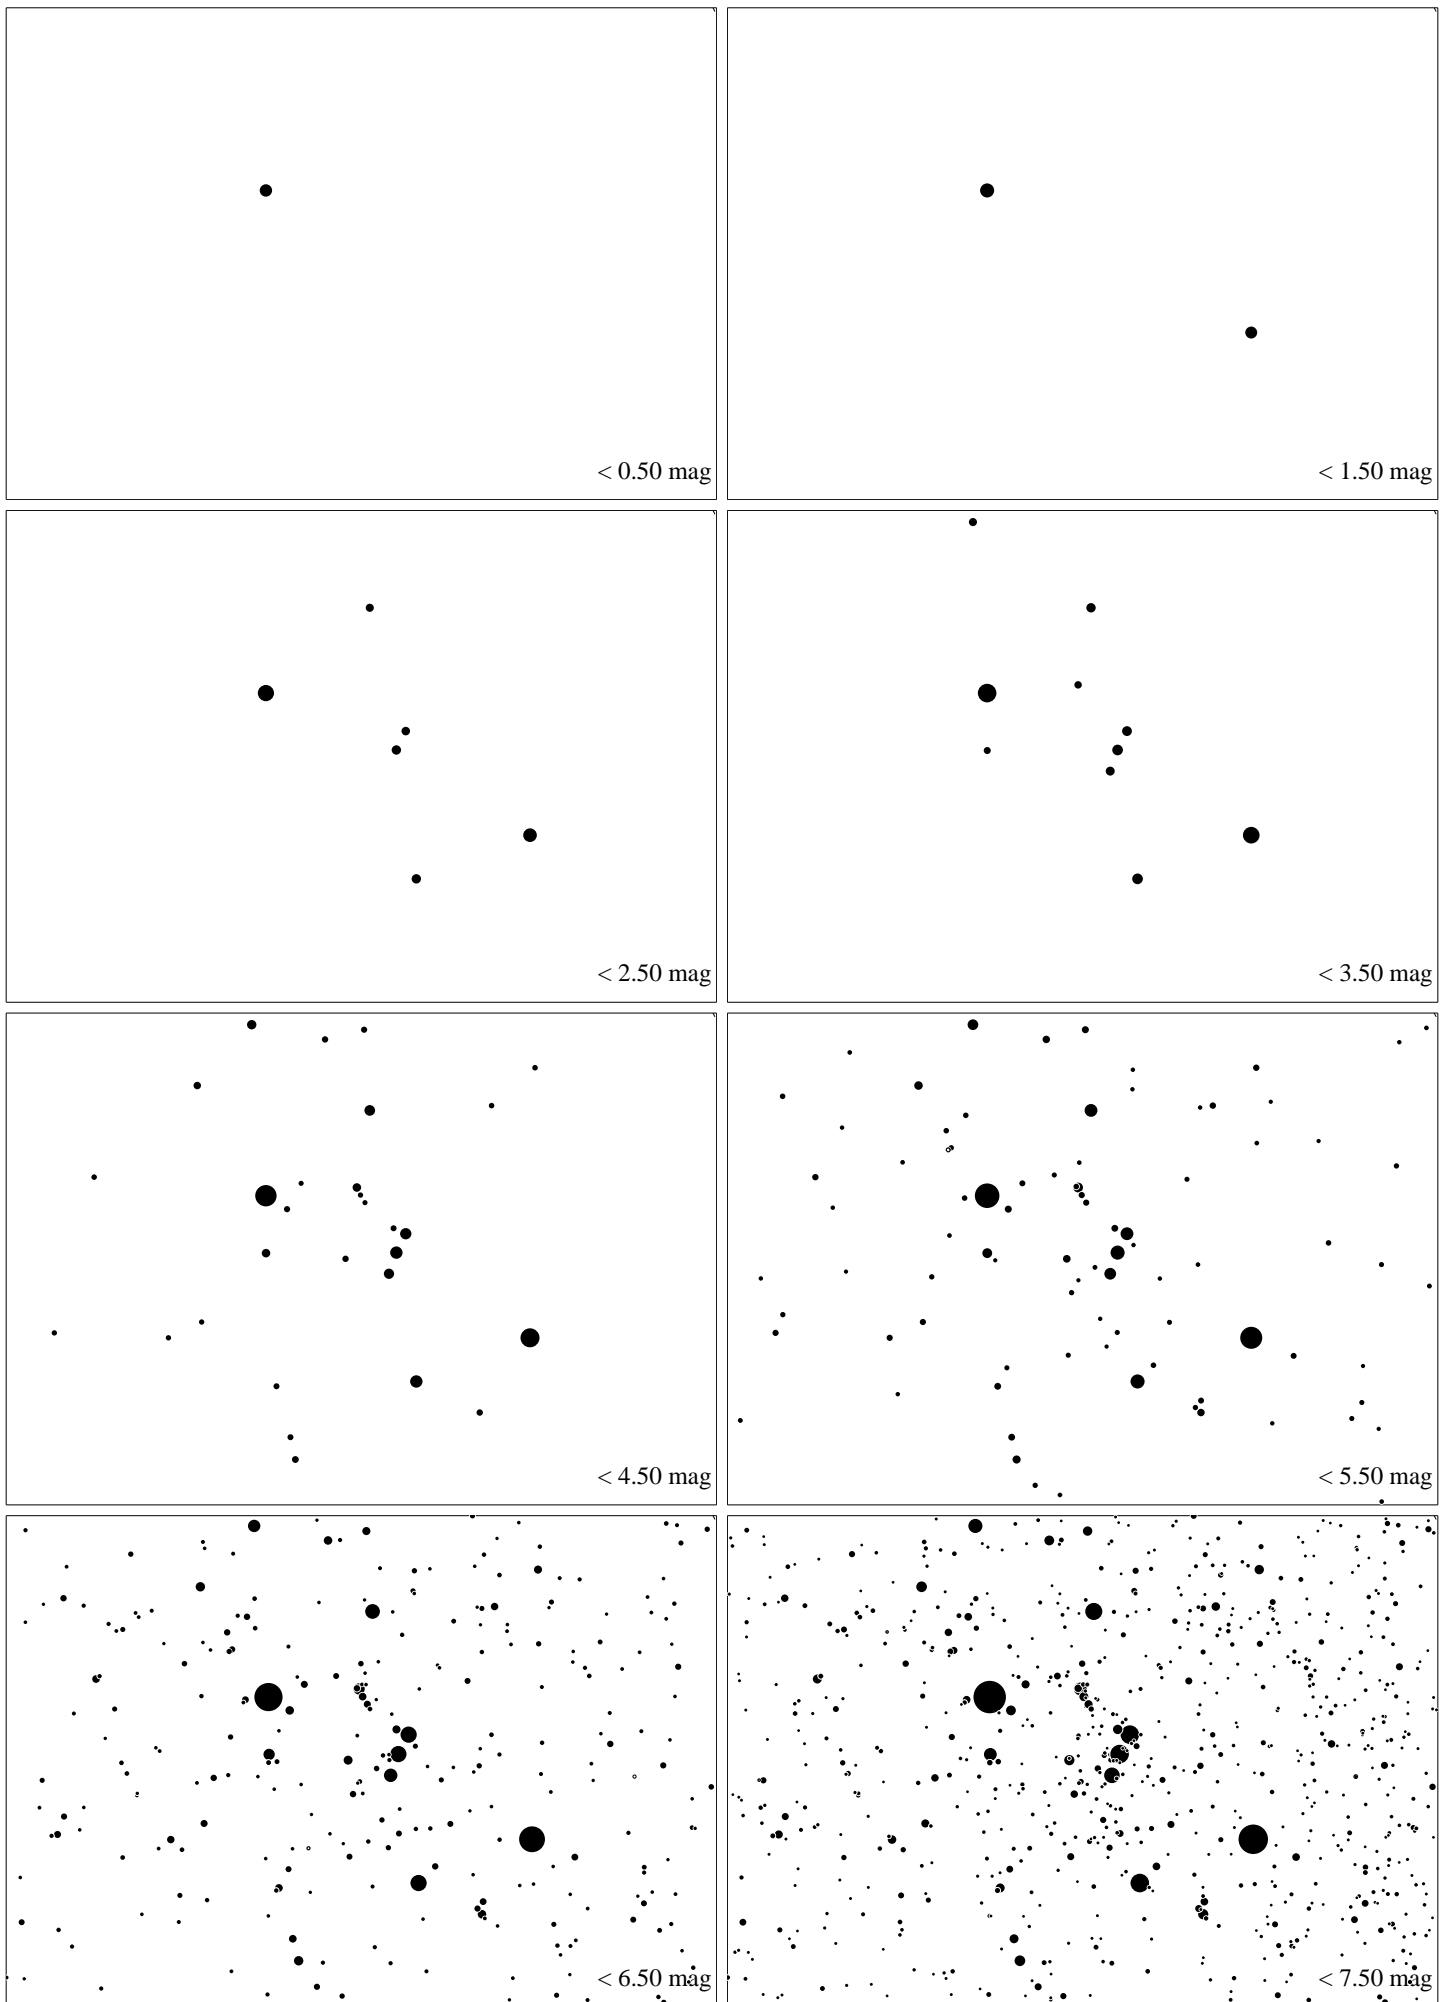

Maps for Globe at Night at the **equator**, March 10, 20 h local time (well after astronomic twilight), assuming rather transparent air. Orion's belt is very high over west. The brightest fixed star, Sirius, at upper left.

*J.H., N. Copernicus Observatory and Planetarium in Brno and <http://www.astro.cz/darksky>*

Maps for Globe at Night at latitude  $20^{\circ}$  S, March 10, 20 h local time (after astronomic twilight), assuming rather transparent air. Orion's belt is  $60^{\circ}$  above NW. The brightest fixed star, Sirius, is just above the map.  
*J.H., N. Copernicus Observatory and Planetarium in Brno and <http://www.astro.cz/darksky>*

Maps for Globe at Night at latitude  $40^{\circ}$  S, March 10, 20 h local time (after astronomical twilight), assuming rather transparent air. Orion's belt  $35^{\circ}$  to the left from the north, at  $45^{\circ}$ . The brightest fixed star, Sirius, a bit above the map. *J.H., N. Copernicus Observatory and Planetarium in Brno and <http://www.astro.cz/darksky>*
