

Maps for Globe at Night latitude  $60^\circ$ , 2015-11-06, 21 h local time (Sun at  $-37^\circ$ ), transparent air. Lines from N(E,S,W) to zenith shown (crosses each  $10^\circ$ ). Centered at Mirfak ( $\alpha$  Persei),  $87^\circ$  to the right from N, at  $60^\circ$  height. The brightest star is Capella. Map vertical size  $50^\circ$ . *Jan Hollan, CzechGlobe*

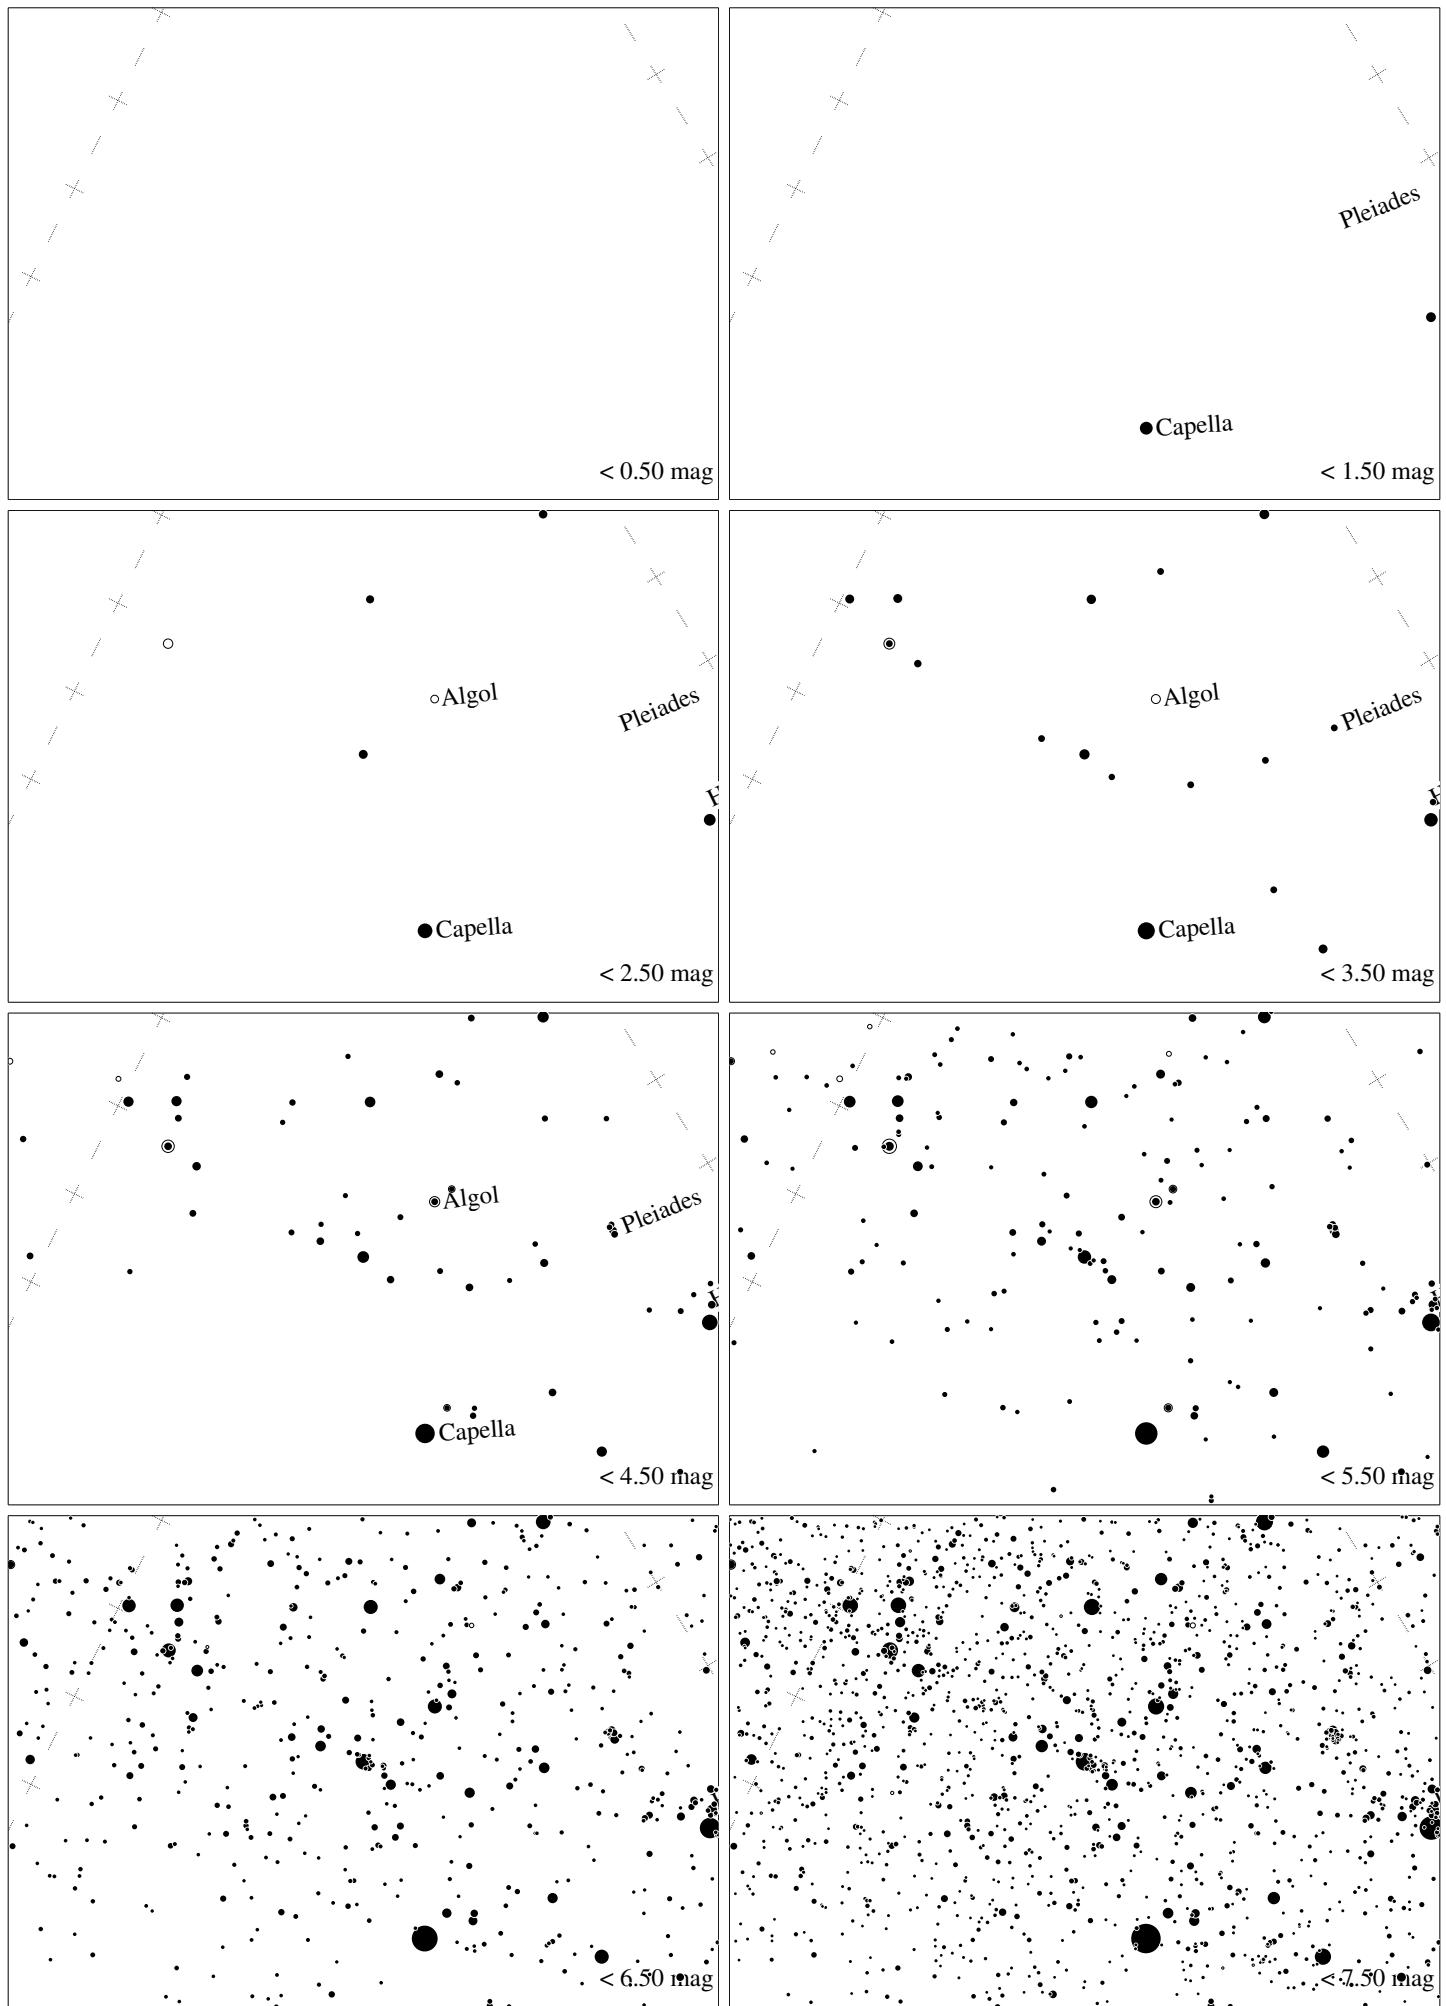

Maps for Globe at Night latitude  $50^\circ$ , 2015-11-06, 21 h local time (Sun at  $-43^\circ$ ), transparent air. Lines from N(E,S,W) to zenith shown (crosses each  $10^\circ$ ). Centered at Mirfak ( $\alpha$  Persei),  $70^\circ$  to the right from N, at  $58^\circ$  height. The brightest star is Capella. Map vertical size  $50^\circ$ . *Jan Hollan, CzechGlobe*

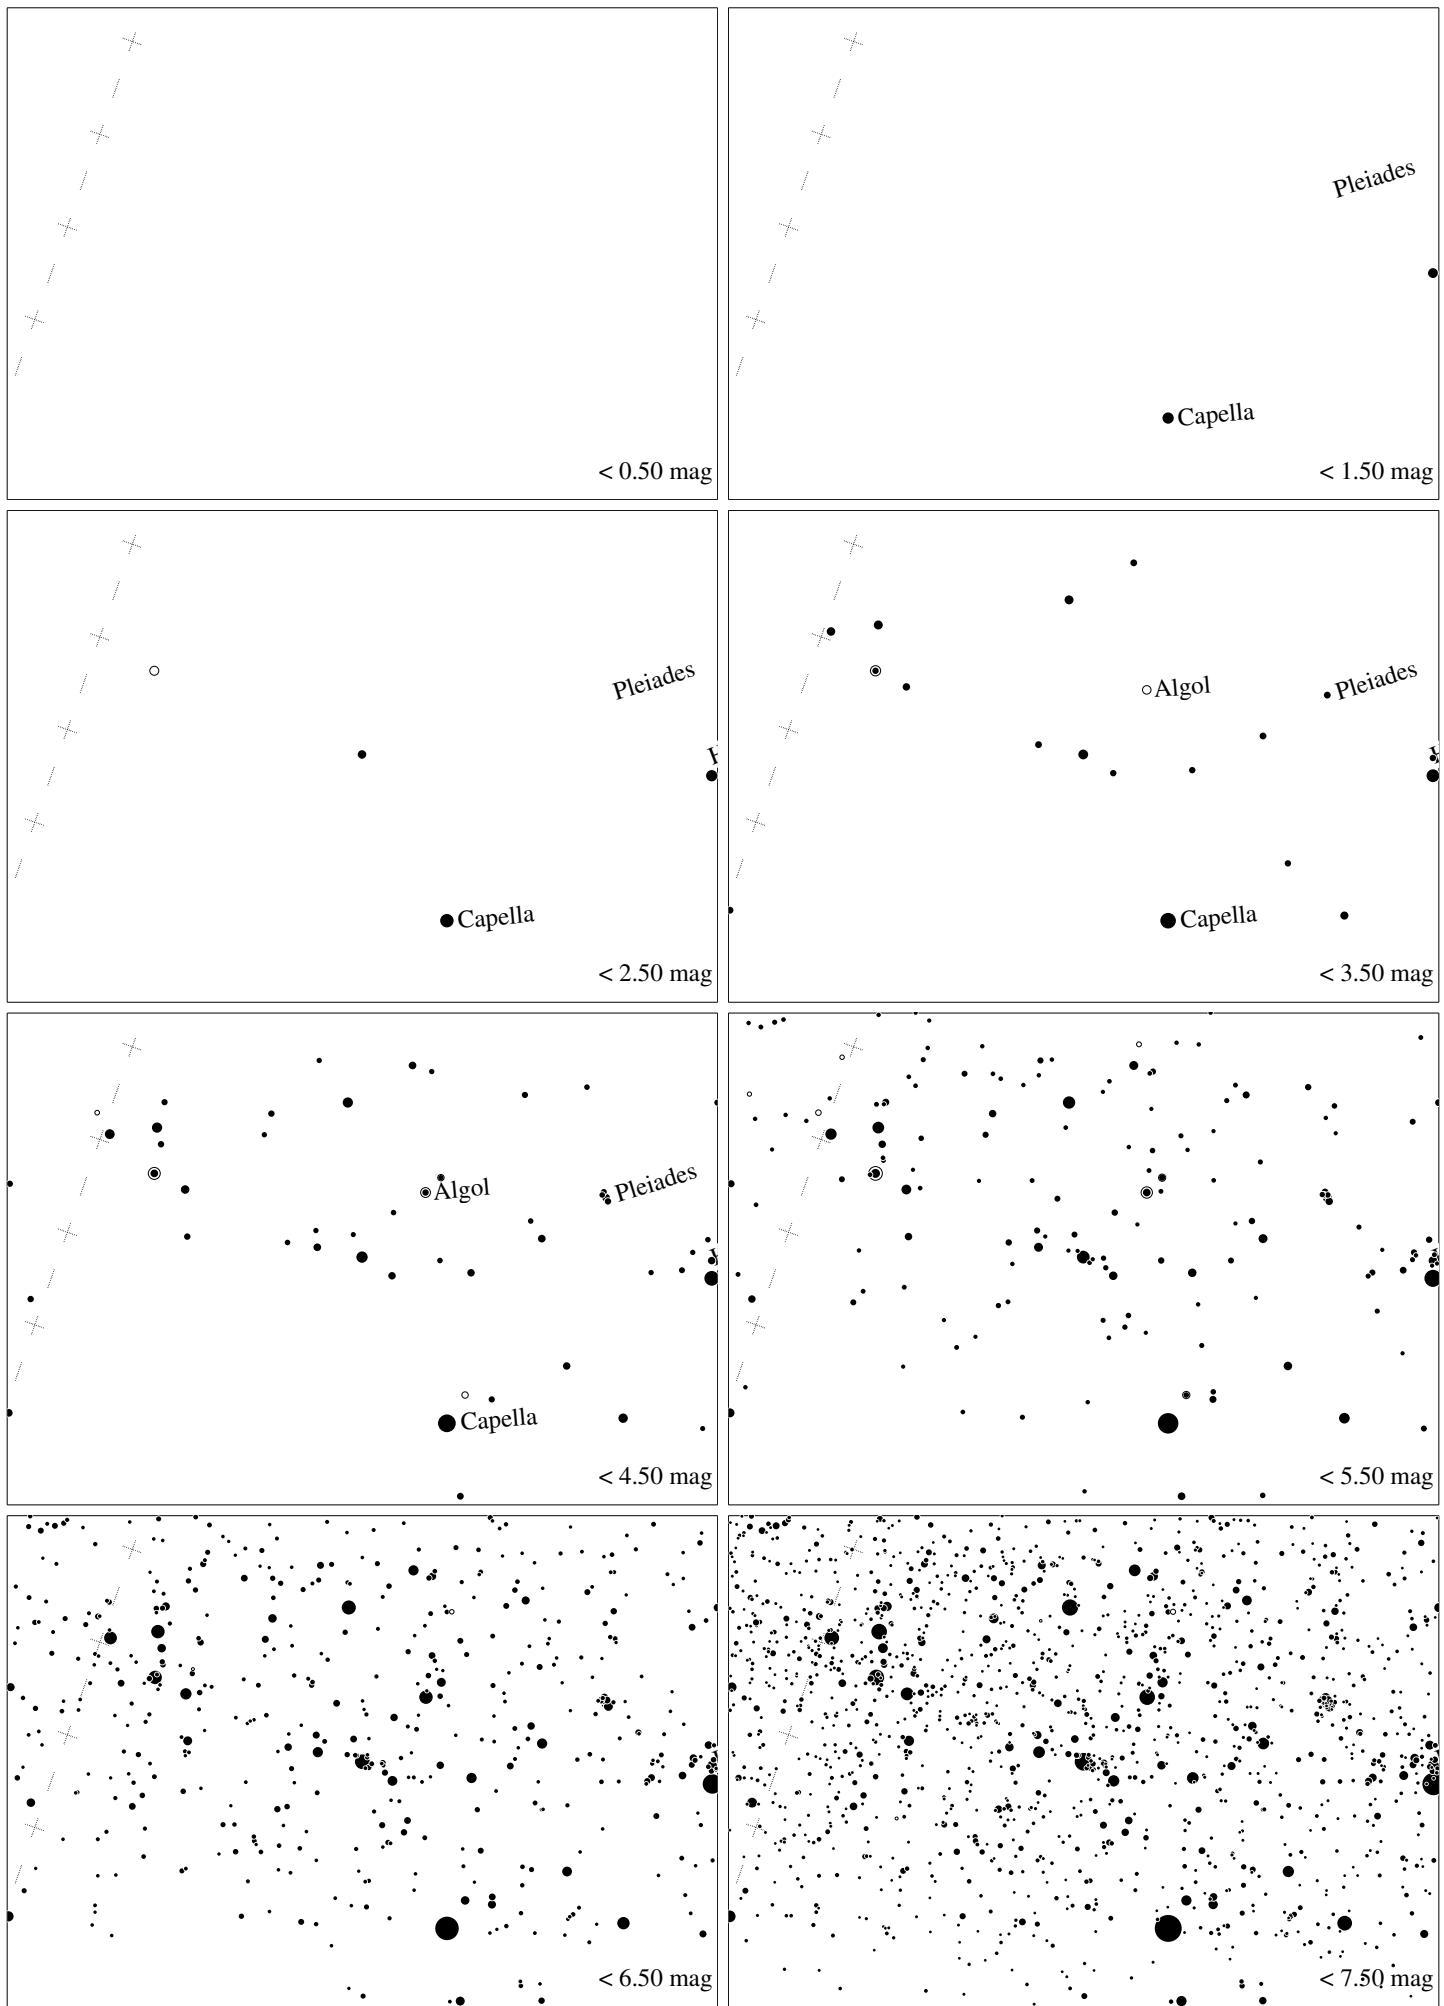

Maps for Globe at Night latitude  $40^\circ$ , 2015-11-06, 21 h local time (Sun at  $-47^\circ$ ), transparent air. Lines from N(E,S,W) to zenith shown (crosses each  $10^\circ$ ). Centered at Mirfak ( $\alpha$  Persei),  $57^\circ$  to the right from N, at  $54^\circ$  height. The brightest star is Capella. Map vertical size  $50^\circ$ . *Jan Holan, CzechGlobe*

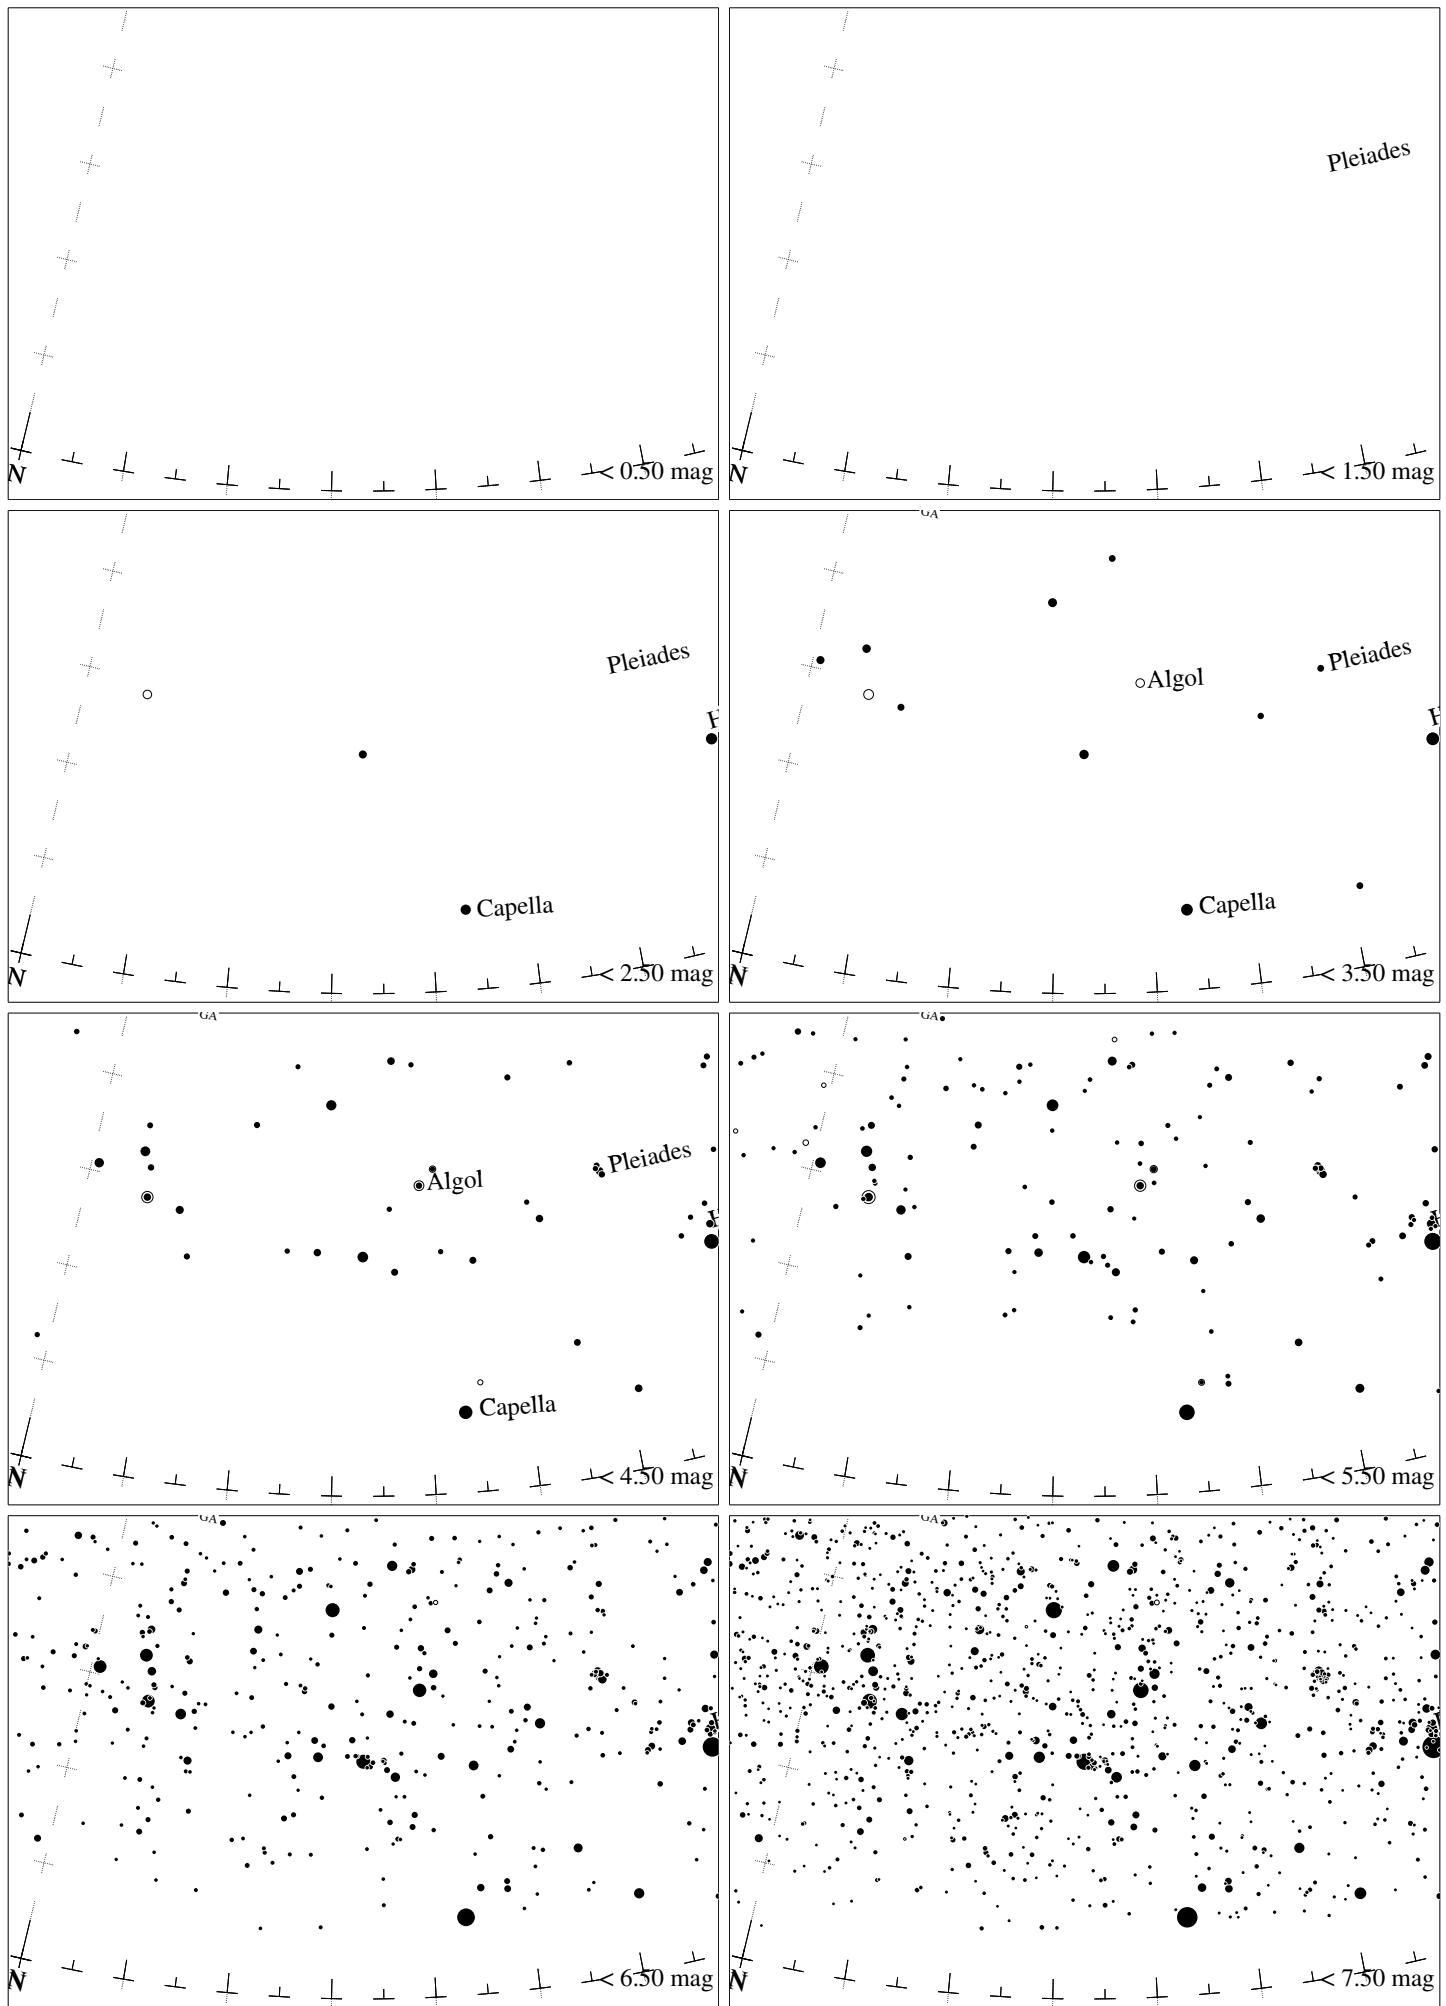

Maps for Globe at Night latitude **30°**, 2015-11-06, 21 h local time (Sun at  $-50^\circ$ ), transparent air. Lines from N(E,S,W) to zenith shown (crosses each  $10^\circ$ ). Centered at Mirfak ( $\alpha$  Persei),  $47^\circ$  to the right from N, at  $47^\circ$  height. The brightest star is Capella. Map vertical size  $50^\circ$ . *Jan Holan, CzechGlobe*

Maps for Globe at Night latitude **20°**, 2015-11-06, 21 h local time (Sun at  $-51^\circ$ ), transparent air. Lines from N(E,S,W) to zenith shown (crosses each  $10^\circ$ ). Centered at Mirfak ( $\alpha$  Persei),  $41^\circ$  to the right from N, at  $40^\circ$  height. The brightest star is Capella. Map vertical size  $50^\circ$ . *Jan Holan, CzechGlobe*

Maps for Globe at Night latitude  $10^\circ$ , 2015-11-06, 21 h local time (Sun at  $-50^\circ$ ), transparent air. Lines from N(E,S,W) to zenith shown (crosses each  $10^\circ$ ). Centered at Mirfak ( $\alpha$  Persei),  $36^\circ$  to the right from N, at  $32^\circ$  height. The brightest star is Capella. Map vertical size  $50^\circ$ . *Jan Hollan, CzechGlobe*

Maps for Globe at Night latitude  $0^\circ$ , 2015-11-06, 21 h local time (Sun at  $-47^\circ$ ), transparent air. Lines from N(E,S,W) to zenith shown (crosses each  $10^\circ$ ). Centered at Mirfak ( $\alpha$  Persei),  $33^\circ$  to the right from N, at  $24^\circ$  height. The brightest star is Capella. Map vertical size  $50^\circ$ . *Jan Hollan, CzechGlobe*
