

Selection criteria

The criteria for selection are scientific excellence, originality and interest across disciplines within the physical sciences and engineering. The Editors are responsible for all editorial decisions and they make these decisions based on the reports received from the referees and/or Editorial Board members. Many more good proposals and articles are submitted to us than we have space to print, and we give preference to those that are of broad interest and of high scientific quality.

Publishing format

Phil. Trans. R. Soc. A articles are published regularly online and in print twice a month. Along with all Royal Society journals, we are committed to archiving and providing perpetual access. The journal also offers the facility for including Electronic Supplementary Material (ESM) to papers. Contents of the ESM might include details of methods, derivations of equations, large tables of data and computer programs. However, the printed version must

include enough detail to satisfy most non-specialist readers. Supplementary data up to 10Mb is placed on the Society's website free of charge. Larger datasets must be deposited in recognised public domain databases by the author.

Conditions of publication

Articles must not have been published previously, nor be under consideration for publication elsewhere. The main findings of the article should not have been reported in the mass media. Like many journals, *Phil. Trans. R. Soc. A* employs a strict embargo policy where the reporting of a scientific article by the media is embargoed until a specific time. The Editor has final authority in all matters relating to publication.

Electronic Submission details

For full submission guidelines and access to all journal content please visit the *Phil. Trans. R. Soc. A* website at rsta.royalsocietypublishing.org.

The Royal Society, the national academy of science of the UK and the Commonwealth, is at the cutting edge of scientific progress. We support many top young scientists, engineers and technologists, influence science policy, debate scientific issues with the public and much more. We are an independent, charitable body and derive our authoritative status from over 1400 Fellows and Foreign Members.

Our mission: to expand knowledge and further the role of science and engineering in making the world a better place.

The Royal Society's strategic priorities are to:

- invest in future scientific leaders and in innovation,
- influence policymaking with the best scientific advice,
- invigorate science and mathematics education,
- increase access to the best science internationally, and
- inspire an interest in the joy, wonder and excitement of scientific discovery.

For further information on the Society's activities, please contact the following departments on the extensions listed by dialling +44 (0)20 7839 5561, or visit the Society's Web site (royalsociety.org).

Preface

Four degrees and beyond: the potential for a global temperature increase of four degrees and its implications
M. New

4

Introduction

Four degrees and beyond: the potential for a global temperature increase of four degrees and its implications
M. New, D. Liverman, H. Schroder & K. Anderson

6

Articles

Beyond ‘dangerous’ climate change: emission scenarios for a new world
K. Anderson & A. Bows

20

**Cumulative carbon emissions, emissions floors and short-term rates of warming:
implications for policy**
N. H. A. Bowerman, D. J. Frame, C. Huntingford, J. A. Lowe & M. R. Allen

45

When could global warming reach 4°C?
R. A. Betts, M. Collins, D. L. Hemming, C. D. Jones, J. A. Lowe & M. G. Sanderson

67

Regional temperature and precipitation changes under high-end ($\geq 4^\circ\text{C}$) global warming
M. G. Sanderson, D. L. Hemming & R. A. Betts

85

Water availability in $+2^\circ\text{C}$ and $+4^\circ\text{C}$ worlds
F. Fung, A. Lopez & M. New

99

Agriculture and food systems in sub-Saharan Africa in a $4^\circ\text{C}+$ world
P. K. Thornton, P. G. Jones, P. J. Ericksen & A. J. Challinor

117

Changes in the potential distribution of humid tropical forests on a warmer planet
P. Zelazowski, Y. Malhi, C. Huntingford, S. Sitch & J. B. Fisher

137

Sea-level rise and its possible impacts given a ‘beyond 4°C world’ in the twenty-first century
R. J. Nicholls, N. Marinova, J. A. Lowe, S. Brown, P. Vellinga, D. de Gusmão, J. Hinkel & R. S. J. Tol

161

Climate-induced population displacements in a $4^\circ\text{C}+$ world
F. Gemenne

182

Rethinking adaptation for a 4°C world
M. Stafford Smith, L. Horrocks, A. Harvey & C. Hamilton

196

**The role of interactions in a world implementing adaptation and mitigation solutions
to climate change**
R. Warren

217

Founded in 1660, the Royal Society
is the independent scientific academy
of the UK, dedicated to promoting
excellence in science
