

Global warming of 1.5 K

October 2018

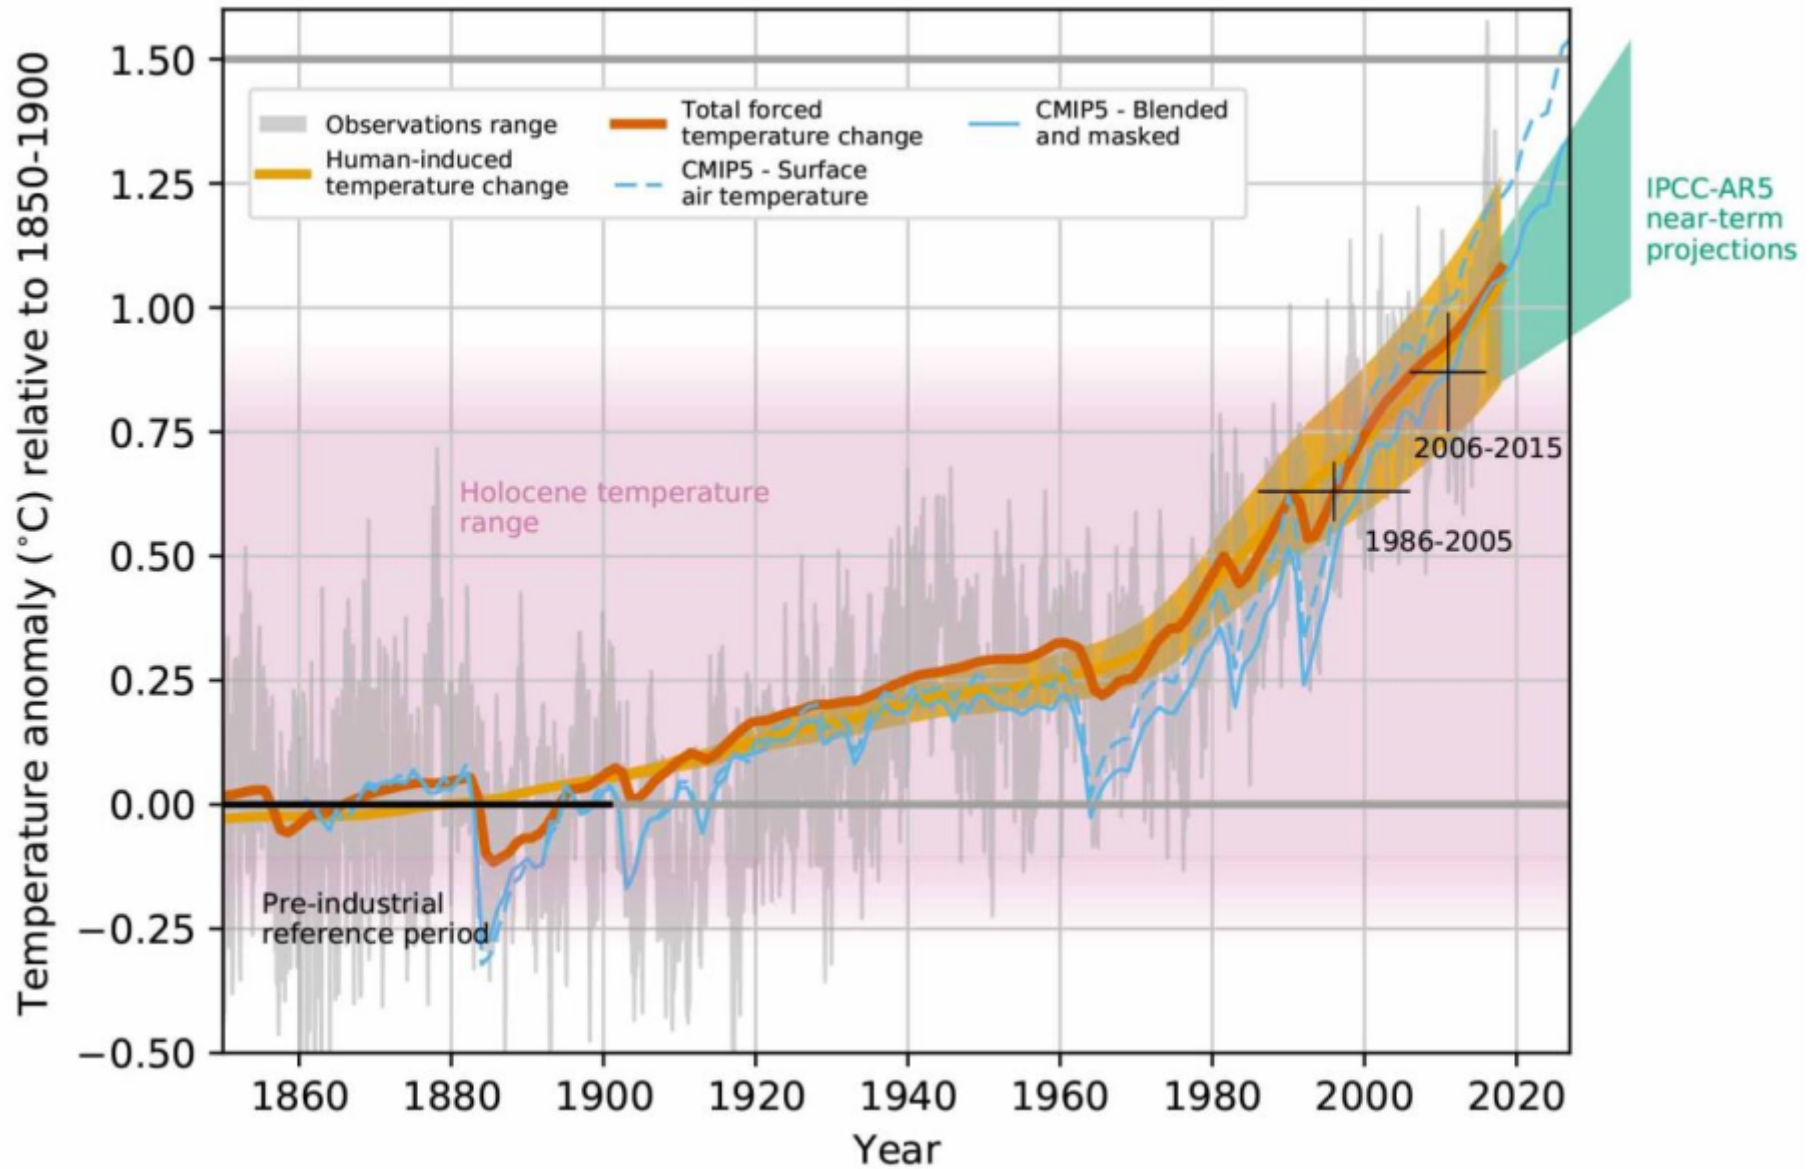

[Jan Hollan](#)

the full IPCC report see at

http://amper.ped.muni.cz/gw/ipcc_cz)

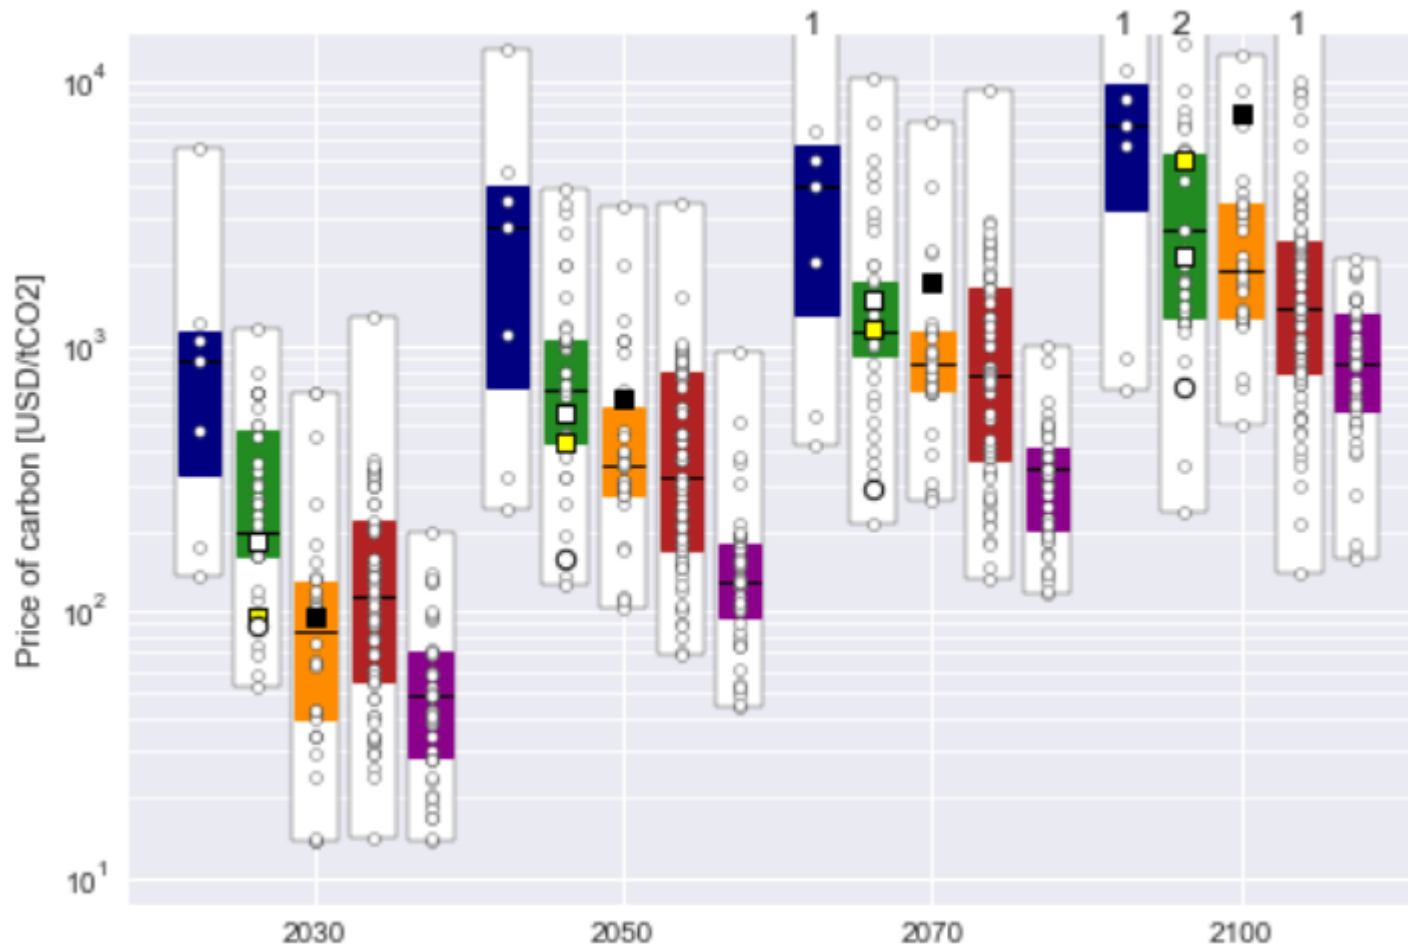

- or its Press release, Headline statements and FAQ as well, on <http://ipcc.ch/report/sr15/>
- 1 K is too much already, 1.5 K will be much worse, but not so disastrous as 2 K of **global warming**
- The report's SPM (Summary for policymakers) had to be agreed word by word by representatives of all governments
- ... and so it omits some key messages of the 1200-page report

but it says that all warming since 1850 is anthropogenic (the graph is then at p. 13 of Chap. 1)

What it omits: to stay below 1.5 K needs “carbon pricing” at levels of several hundred \$ per ton of CO2

- as clearly shown at p. 79 to 82 of Chap. 2

And, the very word “migration” is not even mentioned in the SPM
